

1/18/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

PAT CHRISTENSEN
Bartlesville, OK

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Al Konrad
Haughton, LA

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Karen Headstream
Houston, TX

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Betty Salsbury
Belleville, IL

1/18/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Richard Tharpe

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Carol Kenney
Woodland Park, CO

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

James Hutchinson
Litchfield Park, AZ

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Ronald Lynn
Cleveland, OH

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Capt. Chas. A. Stocking
Accord, NY

1/18/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

David Valler

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Mike Masessa
Esko, MN

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Vincent Puma
Plainview, NY

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Mike Harrell
Houston, TX

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Mike Haney

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Jennifer Neeley
St Amant, LA

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Mark Franck
Papillion, NE

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Chuck Polley
Santa Cruz, CA

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Jesus Lopez
Hidalgo, TX

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Harry Carrier

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Steven Granger
Houston, TX

1/20/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Dean Seller
Worcester, MA

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Jon Bargas

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Tiffany Mercer
Tyler, TX

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Lawrence Charles Roelofsen Jr
Altamonte Springs, FL

1/23/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Clifton Keeler

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Judith Singh
The Woodlands, TX

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

kevin berg

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Albert Davis

1/23/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Don Conn

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

tim harrel
grand jct, CO

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Ron Stevenson
Westpoint, IA

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Eric T. Greager
Evergreen, CO

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Okey Mason
Spring, TX

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

William Nazworth
San Jacinto, CA

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

catherine batcheller

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

John McCarthy
McKinney, TX

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

fran blair

1/23/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

James Monroe

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Herbert Wooten
Crystal Springs, MS

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Sandra Harper
Conroe, TX

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Frank Nonn
Campbellsport, WI

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

John McKee
Fruita, CO

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Henry Buck
Lawrence, KS

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Daniel Bowman

Sincerely,

Del Vandenburg
Madison, WI

1/23/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

CRAIG VOLPE
KLAMATH FALLS, OR

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Robert Thomas
Monroe, NC

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Richard Storm
Albemarle, NC

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Raymond Fisher

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Sammy Reida

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Cynthia Bates
Spring, TX

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Jan Hoyt
Denver, CO

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Mike Bedwell

1/24/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Donald Whitehead

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Eugene Nowicki
Cave in rock, IL

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

louis armstrong

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

John Clark
Lexington, KY

1/24/2013

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Alfred Wujciak

Dear Secretary Steven Chu,

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

nick gebhart
Phoenix, AZ

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Jaime Virgili
Hawthorne, CA

As a member of the oil and natural gas industry, I want to express my support for increasing liquefied natural gas (LNG) exports because it will create more American jobs and strengthen the U.S. economy.

As politicians grapple over ways to generate much-needed government revenue, America has an opportunity before us that could add up to 47 billion dollars to our economy by 2020, create thousands of U.S. jobs and reduce our nation's record trade deficit -- all while providing our allies abroad with safe, secure supplies of clean-burning natural gas.

Your agency's recent study underscores the importance of moving ahead with LNG exports, which it confirms would result in significant economic gains for our country. I urge you to stand by the study's findings and share them with other leaders in Washington and across the country. We can't afford to delay -- America is in urgent need of the new jobs, new investment and new revenue that LNG exports could create.

Sincerely,

Duane Rosekrans
Wenatchee, WA
